

## MAB: The 'Mistletoe and Breast Cancer' Study

A pilot study to investigate the use of mistletoe therapy in breast cancer.

### Why Mistletoe?

Mistletoe therapy is commonly used by cancer patients as a complementary therapy with their conventional treatment in several European countries. It's reported to improve patients' quality of life during chemotherapy.

### Who can help?

Women who are cancer survivors and have had chemotherapy for breast cancer.

### How can you help?

By coming to a Bristol venue **for up to 2 hours** to share your experiences of chemotherapy and to give your thoughts on our study, in a group with 5 other women.

### What do you need to know?

- You don't need to know about mistletoe therapy (but it's fine if you do!);
- Date/ time to be confirmed, but will be before 3<sup>rd</sup> November 2017;
- **We will pay your travel expenses; light refreshments will be provided.**

### Please could you spare 2 hours to help?

Please contact **Lorna Duncan** for more information/ date/ time on  
Tel: **0117 3314561** or by email: [lorna.duncan@bristol.ac.uk](mailto:lorna.duncan@bristol.ac.uk)

**We'll be very grateful for your contribution to our study!**
